## **BSC102 Chemistry**

### **Teaching Scheme**

Lectures: 3Hrs/week  
Credits: 3

### **Examination Scheme**

In-Semester: 50Marks  
End-Semester: 50Marks

### **Course Objectives**

The Chemistry course is designed such that the learners imbibe chemical principles relevant in the engineering context. The course facilitates undergraduates to understand chemical processes, methods of analysis, structure-property relationship and evaluate role of chemical substances for engineering applications. Further the course inculcates basic problem-solving skills involving chemistry principles.

### **Course Outcomes:**

After completion of this course a student should be able to

1. Interpret properties and applications of molecules based on their atomic structure.
2. Analyze quality parameters for water, coal, petrol using analytical methods.
3. Apply chemical principles for problems related to water, batteries, fuel or polymers.
4. Outline the process of synthesis for inorganic substances and nanomaterials.
5. Elucidate the construction and functioning of a device/chemical reagent.

### **Module 1: Physical Chemistry (13)**

**Unit 1.** Chemical Bonding: Types of bonds, intermolecular forces, bonding in molecules: valence bond theory, molecular orbital theory for diatomic molecules.

**Unit 2.** Electrochemistry: Electrochemical cell, Nernst equation, EMF of cell, reference and indicator electrodes, battery characteristics, Lead-acid, Lithium-ion battery, Fuel cell technology.

### **Module 2: Inorganic and Materials Chemistry (13)**

**Unit 3.** General overview of the Periodic table and properties; chemistry of some elements like H, Si and their compounds, Si for chipmaking, H<sub>2</sub> gas as fuel.

**Unit 4.** (A) Engineering materials: Structural features, properties and applications of OLEDs - PPV (- solar cell), liquid crystal polymers, conducting polymers – as a chemical sensor, polymer composites.

(B) Nanomaterials:

Introduction to nanomaterials, synthesis by top down and bottom-up methods.

Structure, synthesis and some typical applications of nanomaterials.

### **Module 3: Analytical Chemistry**

**(16)**

**Unit 5.** Analysis of -

(A) Water: Hardness determination in water, TDS, effect of hard water in boilers, Internal and external treatment of hardness, water softening techniques -zeolite and ion exchange method. Desalination methods-Reverse osmosis. Electrodialysis. Waste water recycling.

(B) Carbon based fuels: Analysis of coal/petrol.

**Unit 6.** Analytical techniques such as spectroscopy, pH-metry, conductometry and their applications.

#### **Text Books:**

1. S.S. Dara 'Engineering Chemistry' S. Chand Publications (2010)
2. B.S. Chauhan 'Engineering Chemistry': Univ Sc Press. (Third edition)2009
3. Shashi Chawla 'A Text Book of Engineering Chemistry': Dhanpat Rai & Co. (2015)
4. Jain and Jain 'A Text Book of Engineering Chemistry' Dhanpat Rai & Co.
5. G. Chatwal 'Instrumental methods of Chemical Analysis' Himalaya publication house

#### **Reference Books:**

1. Steven S. Zumdahl, 'Chemistry concepts and applications', Cengage learning publication (2009)
2. Ram D. Gupta, 'Hydrogen fuel 'C.R.C. Publications (2009)
3. Puri, Sharma, Pathania 'Principles of Physical Chemistry': Vishal Publ. Co.
4. Robert Braun' Instrumental methods of analysis' Pharma med press (2010)
5. J.D. Lee, 'Concise Inorganic Chemistry', 4<sup>th</sup> edition, Wiley Publication (2019)

## **BSC103 Linear Algebra and Univariate Calculus**

### **Teaching scheme**

Lectures: 3hrs/week

Tutorial: 1hr/week

Number of Credits: 4

### **Examination scheme**

In-Sem Exam: **50** Marks

End-Sem Exam: **50** Marks

### **Course Objectives:**

1. To familiarize the prospective engineers with techniques in linear algebra and calculus of one variable.
2. To equip the students with standard concepts and tools in linear algebra and calculus of one variable which they will find useful in their disciplines.

### **Course Outcomes:**

After completion of this course a student should be able to

**CO1:** Use matrix method to solve linear system of equations, Linear Transformations.

**CO2:** Calculate eigenvalues, eigenvectors and apply it to diagonalize a matrix.

**CO3:** Apply knowledge of linear algebra to solve simple real life problems.

**CO4:** Compute differentiation, series expansion, integration of function of one variable.

### **Unit-I: Matrices (08)**

Rank of a matrix, Echelon form, System of linear equations, Euclidean vector spaces and Linear Transformations

### **Unit-II: Diagonalization of a Matrix (08)**

Eigenvalues, Eigenvectors, Properties of Eigenvalues, Diagonalization of a matrix

### **Unit-III: Applications of Linear Algebra (09)**

Introduction to Modular Arithmetic, Euclid's algorithm, Encrypt and decrypt the statement using matrix, Applications to simple real life problems

### **Unit-IV: Differential Calculus (08)**

Successive differentiation, nth order derivatives of some standard functions, Taylor's and Maclaurin's theorem, Standard series expansions

**Unit-V: Integral Calculus**

**(09)**

Reduction formulae, Beta Function, Gamma function, Differentiation under integral sign, Error function

**Text-Books:**

1. David Poole, 'Linear Algebra: A Modern Introduction', 2<sup>nd</sup> Edition, Brooks/Cole (2005).
2. B. V. Ramana, 'Higher Engineering Mathematics', *Tata McGraw-Hill Publications*, (2007).
3. B.S. Grewal, 'Higher Engineering Mathematics', *Khanna publishers*, Delhi (40<sup>th</sup> edition), (2008).

**Reference Books:**

3. George Thomas, Jr., Ross Finney, Late, Calculus, 9<sup>th</sup> edition, *Pearsons India*
4. Sudhir Ghorpade, Balmohan Limaye, 'A Course in Calculus and Real Analysis', (Undergraduate Text in Mathematics), *Springer* (2006).
5. Erwin Kreyszig, 'Advanced Engineering Mathematics', *Wiley Eastern Ltd* (10<sup>th</sup> Edition), (2017)

## **ESC102 Basic Electrical and Electronics Engineering**

### **Teaching Scheme:**

Lectures: 3 Hrs./Week

Credits: 3

### **Examination Scheme**

In-Semester: **50** Marks

End-Semester: **50** Marks

### **Course Objectives:**

1. To educate the students about the realization of basic theoretical concepts & laws in electrical engineering in real physical world.
2. To make students familiar with three phase supply.
3. To make students familiar with single phase transformers.
4. To understand the construction and applications of diode and BJT
5. To understand basics of combinational logic, Boolean algebra and flip -flops.

### **Course Outcomes:**

After completion of course, students will be able to

**CO1:** Analyze and calculate parameters of DC circuits

**CO2:** Analyze and calculate parameters of AC circuits

**CO3:** Calculate performance parameters of single-phase transformer.

**CO4:** Analyze I-V characteristics of semiconductor diodes and transistors and design simple analog circuits using these devices

**CO5:** Build simple combinational and sequential logic circuits.

### **Unit – I: DC Networks**

**(08)**

Kirchhoff's laws, Mesh and Nodal Analysis, Thevenin and Superposition Theorems, maximum power transfer theorem, Network Simplifications using star-delta / delta-star transformations.

### **Unit – II: AC Circuits**

**(07)**

Series and parallel RL, RC and RLC circuits , concept of Impedance and admittance, power triangle and power factor. Resonance in series and parallel RLC circuit, Three phase voltage generation and waveform, star and delta balanced systems. Relationship between phase and line quantities, phasor diagram, power in a three phase circuit.

### **Unit – III: Electromagnetism and Single Phase Transformers**

**(06)**

Magnetic materials and B-H curve, self and mutual inductance,  $1 \Phi$  transformer: concept, types, working, ideal transformer, practical transformer, equivalent circuit, phasor diagram, efficiency and regulation calculations.

**Unit – IV: Diodes and rectifiers**

**(07)**

Construction and characteristic of p-n junction diode, LED, photodiode, Half wave, full wave and bridge rectifiers, need of capacitor filter, rectifier operation with capacitor filter, Zener diode as a voltage regulator, block diagram of Regulated power supply

**Unit – V: Junction Transistor Amplifiers**

**(07)**

Bipolar junction transistor, Construction of BJT, Types of biasing:-fixed bias and self bias circuit, BJT characteristics for-CE,CB,CC configurations, relationship between  $\alpha$  and  $\beta$ , load line for a transistor, application of transistor as a switch and amplifier.

**Unit – VI: Digital Electronics**

**(07)**

Basic gates, implementation of basic gates using universal gates, Boolean algebra, standard representation of logic functions (SOP and POS forms), Introduction of Combinational logic circuits like multiplexer ,demultiplexer, half adder and full adder, Introduction of Sequential logic circuits like flip- flops (SR, D), counters and shift registers.

**Text Books:**

1. Hughes, 'Electrical and Electronic Technology', Pearson education, (10th edition), (2008)

**Reference Books:**

1. D.P. Kothari and I.J. Nagrath, 'Basic Electrical Engineering', McGraw-Hill, (3rd edition), (2010)
2. A.E.Fitzgerald, A.Grabiell,'Basic Electrical engineering',McGraw-Hill, (5th edition), (2009)
3. Floyd, 'Electronic Devices and Circuits', pearson education, (7th edition),(2008)
4. AP Malvino & Donald Leach,'Digital Principles and Applications', McGraw Hill Education,(6 th edition), (2009)

## **IKS101 Indian Knowledge System**

### **Teaching Scheme:**

Lecture: 2 Hrs. /week  
Credits: 2

### **Examination Scheme:**

In semester: 50 marks

### **Course Objectives:**

1. Creating awareness amongst the students about the true history and rich culture of the country
2. Understanding the scientific value of the traditional knowledge of Bhārata
3. Converting the Bhāratīya wisdom into the applied aspect of the modern scientific paradigm
4. After completion of this course the students will get a holistic insight into understanding the working of nature and life

### **Course Outcome:**

After completion of this course a student should be able to

**CO1.** Recall ancient Indian Linguistics, philosophy and knowledge system.

**CO2:** Recall ancient Indian sciences such as medicine, agriculture, astronomy and Artha-shastra.

**CO3:** Identify different ancient Indian Art & crafts.

**CO4:** Identify ancient Indian architecture and Military science.

### **Unit – I: Ancient Indian philosophy and knowledge system**

**(07)**

Vedic Period: Vedas and their Significance, Upanishads: Philosophy and Knowledge, The Six Schools of Indian Philosophy: Overview, Indian Linguistics: Panini and Sanskrit, Evolution of Other Indian languages - Tamil, Marathi, Hindi etc , Ancient Indian Education System: Gurukul System, Ancient Indic Religions: Hinduism, Buddhism, Jainism and Sikhism: Teaching & Philosophy

### **Unit- II: Ancient Indian Science**

**(08)**

Ancient Indian Mathematics: Overview and Contributions, Ancient Indian Astronomy and Astrology: Overview and Contributions, Charak & Sushrut Samhita, Ayurveda: Principles and

**Unit- III: Ancient Indian Art and crafts**

**(06)**

Ancient Indian Art and Culture, Ancient Indian Music and Dance, Ancient Indian craftsmanship

**Unit- IV: Ancient Indian Architecture**

**(07)**

Ancient Indian Architecture: Vastu Shastra and Temple Architecture, Ancient Indian Warfare and Weaponry, Ancient Indian Engineering and Technology, Ancient Indian Knowledge Systems: Global Influence

**Textbooks:**

Introduction to Indian knowledge system: Concepts and Applications by B. Mahadevan, Vinayak Rajat Bhat, Nagendra Panana R.N. PHI Publication

**Reference Books:**

1. Knowledge System in India by Amit Jha, Atlantic Publishers & Distributors (P) LTD
2. Textbook on the Knowledge System of Bhārata by Bhag Chand Chauhan.

### **CC101 Liberal Learning course - 1**

**Teaching Scheme:**

Lecture: 1 Hrs. /week

Practical: 2 Hr/week

Credits: 2

**Examination Scheme:**

In semester: 50 marks

**Course Objectives:**

1. To encourage the holistic development of students through art forms.
2. To develop life skills of the students through individual and group activities.

**Course Outcome:**

After completion of this course the students will be able to

**CO1:** Present the creative work through art forms.

**CO2:** Demonstrate the ability to lead and participate in teams.

**NOTE:**

1. Hands on session of 2 hrs/ week for 12 weeks will be conducted.
2. Student will opt for any one of the following five modules.

**Module 1: Culinary Arts (12)**

Planning a meal, Pre-cooking preparation, ingredients measurements, cleaning of vegetables, chopping and actual cooking.

Preparation and cooking Chinese dishes sandwiches, donuts, mocktails, cookies, salads, noodles, pasta, wheat brownie etc.

**Module 2: Dance (12)**

Warm up sessions, basic dance steps on Bollywood music, Zumba, folk dance, choreography.

**Module 3: Gardening (12)**

Fundamentals of gardening, projects like terrarium, kokedama, etc. knowledge of soil, fertilizers and seeds. Fundamentals of landscape designing.

**Module 4: Painting (12)**

Indian art forms, viz. Warli, Madhubani, Mandala, and Dot Painting. Familiarity with variety of materials, viz. acrylic, pencil, and water colour paints.

**Module 5: Theatre (12)**

Variety of exercises and activities such as improvisation, character development, scene work, vocal and physical warm-ups, script analysis, and feedback sessions. Technical aspects of theatre production such as lighting, sound, and set design.

**Textbooks:**

**Culinary arts:** “Theory of Cookery” by Krishna Arora, Macmillan Publishers

**Dance:** “Text book of Dance” by Gyanendra Dutt Bajpai, Kanishka Publisher

**Gardening:** “Gardening in India” 2<sup>nd</sup> Edition, by T K Bose, D Mukharjee, Oxford and IBH Publishers

**Painting:** “Panoramic Indian Painting” by R C Luther, C K Luther, Nidhi Sekhon Vishal Publishing Co.

**Theatre:** “Indian Theatre: Drama, Music and Dance” by Shovana Narayan, Shubhi Publishers.

## **AEC 101 Professional Communication**

### **Teaching Scheme**

Lecture: 1 Hr/week  
Practical: 2Hrs/week  
Credits: 2

### **Examination Scheme:**

In semester: 50 marks

### **Course Objectives:**

1. Enable engineering students to communicate effectively and work smoothly with classmates, clients and people involved in projects.
2. Nurture students' professional skills encompassing written, verbal and electronic communication realms, with a primary focus on refining their soft skills.

### **Course Outcome:**

After completion of this course a student should be able to

**CO1.** Illustrate their Communication Skills through impactful presentations.

**CO2.** Develop proficient written communication skills for tasks such as drafting resumes, cover letters, and summary of articles on recent trends in technology

**CO3.** Compose well organized professional emails and create social media profiles.

### **Module I: Verbal Communication**

**(06)**

Key concepts and barriers in effective communication, Elevator pitch for self: Delivery and practice, Presenting a news item: Analysis and delivery, Presentation on a topic related to technology / science / social science, Group Discussion.

### **Module II: Written Communication**

**(06)**

Resume Writing and Cover letter, Writing summary of an article on recent trends in technology, Book/ Movie review.

### **Module III: Email Communication**

**(02)**

Professional e-mails and creating an effective social media presence (e.g., LinkedIn Profile)

**Text Books:**

1. M. Ashraf Rizvi, "Effective Technical Communication", Tata McGraw-Hill Publishing Company Limited, New Delhi (2008)
2. Jeff Butterfield, "Soft Skills for Everyone" Cengage Learning India Private Limited, New Delhi (2019)

**Reference Books:**

2. William K Zinsser, "On Writing well", HarperCollins, (2012).
3. Stephen King, "On Writing: A Memoir of the Craft", Pocket Books, (2002)

**Website URL:**

TED talks - <https://www.ted.com/talks>

**Lab Sessions: (2hrs each)**

1. Exercise on Listening Skills to understand barriers in Communication.
2. Elevator Pitch.
3. Presenting a News item
4. Group Discussion on topics related to technology/ science / social science.
5. Preparing a Cover Letter and Resume.
6. Writing a summary of an article on recent trends in Technology.
7. Creating a LinkedIn Profile.
8. Writing a Book/Movie review.
9. Drafting a professional email.

## **BSC102L Chemistry Lab**

### **Teaching Scheme:**

2 hours / week

Number of Credits: 1

### **Examination scheme:**

Term Work: 25Marks

### **Course outcomes**

After completion of this course a student should be able to

- CO1 :** Apply chemistry principles for quantitative analysis.
- CO2 :** Make use of an instrument for chemical analysis.
- CO3 :** Calculate chemical parameter based on recorded observations.
- CO4 :** Evaluate quality of coal and polymer based on their chemical properties.
- CO5 :** Prepare a chemical substance such as soap, zeolite, biopolymer etc. based on experimental procedure.

### **LIST OF EXPERIMENTS:**

1. Determination of total hardness of sample water by EDTA Method (complexometric titration)
2. Determination of total alkalinity of sample water.
3. Measuring EMF of electrochemical cell to predict spontaneity as well as to calculate Gibb's free energy and equilibrium constant.
4. Viscometric method to determine Molecular weight of a Polymer.
5. Estimation of sodium from given solution using flame photometry.
6. Colorimetric estimation of  $\text{KMnO}_4$  from solution.
7. Proximate analysis of coal samples and Comment on it's quality.
8. Laboratory preparation of soap.

## **ESC102L Basic Electrical and Electronics Engineering Lab**

### **Teaching Scheme:**

Practical: 2 Hrs./Week

Credits: 1

### **Examination Scheme:**

In semester : 25 marks

### **Course Outcomes:**

After completion of course, students will be able to

- CO1:** Perform basic domestic wiring
- CO2:** Apply circuit laws to find the parameters of given electrical network
- CO3:** Build a basic regulated DC power supply
- CO4:** Obtain frequency response of CE amplifier
- CO5:** Build basic digital circuits

### **List of experiments:**

- Introduction of different electrical and electronics components and instruments.
- To perform electrical wiring to control lamps using one way and two-way switches.
- To verify Thevenin's theorem & superposition theorem.
- To determine phase angle of L-C-R series circuit.
- To perform load test on single phase transformer to determine regulation and efficiency.
- To determine output voltage and ripple voltage of half wave, full wave rectifier with center tap transformer and bridge rectifier with and without filter.
- Assemble and build simple DC regulated power supply.
- To determine frequency response of CE amplifier.
- Assemble and build half adder & full adder circuits.

## **VSEC101L Programming Skills in C Language Lab**

### **Teaching Scheme:**

Practical: 4 Hr/week

### **Examination Scheme:**

In-Sem: 25 Marks

Practical/oral: 25 Marks

**Credits: 2**

### **Course Objectives:**

To facilitate the learners:

1. To learn the fundamentals of C programming for logic building.
2. To implement a solution of given problem using appropriate data type, operators of C language.
3. To understand the decision and iteration interpretation in a programming language.
4. To implement the logic using arrays, strings, functions, pointers and structures of C programming language.

### **Course Outcomes:**

After completion of course, students will be able to

**CO1:** Develop the logic for a given problem using flowchart/ algorithm/ pseudo code.

**CO2:** Apply appropriate basic language constructs, decision and iterative constructs for solving the given problem.

**CO3:** Implement the solution for a given problem using Arrays, String, Structures and functions.

**CO4:** Apply C programming skills to simulate real life problems/scenarios/applications.

Intent of this laboratory is to build the logic development and problem solving skills of students and build proficiency and competency in C language. For this purpose a sample list of assignments are grouped into Group A, Group B and Group C with increasing levels of difficulty and understanding.

Group A assignments are based on real life problems using language constructs such as constant, variable, data type, operator, array, string, expressions, decision, iteration etc.

Group B assignments are based on the applications of language constructs and combination of language constructs, control structures, String, Arrays, Pointers, Structures, Functions.

Group C assignments are a little more challenging. Assignments will be open ended which can either be a mini project or simulation of real life problems/scenarios/applications. It can also include Debugging and Feature enhancement / Alternative solution/ testing / Code-refactoring of

given problem statements or Analyze the given code and comment on the output.

Instructors can conduct a total of 10 assignments, six from Group A, three from Group B, one from Group C. Other assignments can be considered as extra assignments.

Instructors must enhance assignment by coming up with new application domains, by combining multiple constructs in one assignment or more complex logic.

### **Suggestive List of Assignments**

**Assignment 0:** Get acquainted with Windows/Linux Platform, C environment, IDE installation, structure of basic C program, compilation, debugging and execution of C program.

#### **Group A - Language constructs**

For Group A problem statements, students should draw flowchart/ algorithm/ pseudo code and convert it into a C program. Problems are based on constructs such as concepts of constant, variable, data type, operator and expressions, arrays, strings, iteration, decision making and others.

- 1) Convert measurement units such as feet to inches, inches to centimeters, and centimeters to meters, Kilograms to grams, grams to milligrams, Dollar to Rupees, Euro to Rupees, temperature conversion Degree to Fahrenheit, days into years, weeks and days and vice versa.
- 2) Basic problems of Engineering Mathematics and Physics like area calculation, sine wave calculation, speed calculation, determining type of triangle, verify pythagoras theorem etc.
- 3) Obtain the first 25 numbers of a Fibonacci sequence/prime numbers with and without recursion etc.
- 4) Search the data from an array of numbers/ characters/ string.
- 5) Calculate the total number of characters in the string and the total number of vowels in the string with the number of occurrences in the string.
- 6) Operations on matrices.
- 7) Find the maximum/minimum of given numbers.
- 8) Order the numbers in sequence.
- 9) Swap two data elements using pass by value, pass by reference and without using a third variable.
- 10) Number conversion (decimal to binary, binary to decimal, binary to octal, octal to binary)
- 11) Reverse a string without using a third variable.

#### **Group B - Applications of Language Constructs**

Group B problem statements address the applications of language constructs such as Loops for iteration, Arrays, Strings, Structures, Functions for modularity wherever required. They should implement the application using a function (call by reference/ call by value) wherever appropriate. Problems are based on real life applications/ scenarios.

## MKSSS's Cummins College of Engineering for Women, Pune

(An Autonomous Institute Affiliated to Savitribai Phule Pune University, Pune)

- 1) Perform employee operations such as accept, display, search by name, search by number, update a record. Explore the possibility of modularity for implementation.
- 2) For a class an examination is conducted and the results for the students of all the 5 subjects are recorded. Write a C program to display the record of students. On the basis of the record compute:
  - i. The average score of class
  - ii. Highest score and lowest score of class
  - iii. Marks scored by most of the students
  - iv. List of students who were absent for the test
- 3) Write a menu-based modular program in C to perform following operations for complex numbers:
  - i. reading a complex number
  - ii. writing a complex number
  - iii. addition of two complex numbers
  - iv. subtraction of two complex numbers
  - v. multiplication of two complex numbers
- 4) Two friends issued 5 books each from the library, Write a program in C to compute operations
  - i. List of all books with them
  - ii. List common titles with them
  - iii. List of books with friend 1 but not with friend 2
- 5) A list of names of users of a product of a company is provided. Write a modular C program to calculate the total number of characters in the name and the total number of vowels in the name with the number of occurrences in the name, search set of characters in name, and sort names.
- 6) Create a structure to specify data of customers in a bank. The data to be stored is: Account number, Name, Balance in account. Assume a maximum of 200 customers in the bank. (a) Write a function to print the Account number and name of each customer with balance below Rs. 100. (b) If a customer requests for withdrawal or deposit, it is given in the form: Acct. no, amount, code (1 for deposit, 0 for withdrawal) Write a program to give a message, "The balance is insufficient for the specified withdrawal"
- 7) Find Permutations in which n people can occupy r seats in a theatre.
- 8) In a secret language DOG is written as HSK, CAT is written as GEX. Write a program to accept a string from a user and convert it into the secret language and accept a string in the secret language and convert it back to English.

## **Group C**

Group C problem statements address big real life problem solving. Students are expected to apply the learnt concepts to solve these problems. Students should choose any one of the following:-

- 1) Mini Project - Small games like - tic-tac-toe, Create Crossword, Solving sudoku, Information system projects

Students should implement a mini project/ game which simulates real life problems/scenarios/applications. They are expected to make use of the appropriate constructs of C language.

- 2) Debugging and Feature enhancement / Alternative solution / testing / Code-refactoring of given problem statement.

Students will be given a large and ready code. Students are expected to read and understand the code, be able to debug the code, be able to enhance the feature in given code, to be able to find alternative solutions, or refactor the given code.
