Demo-based Learning

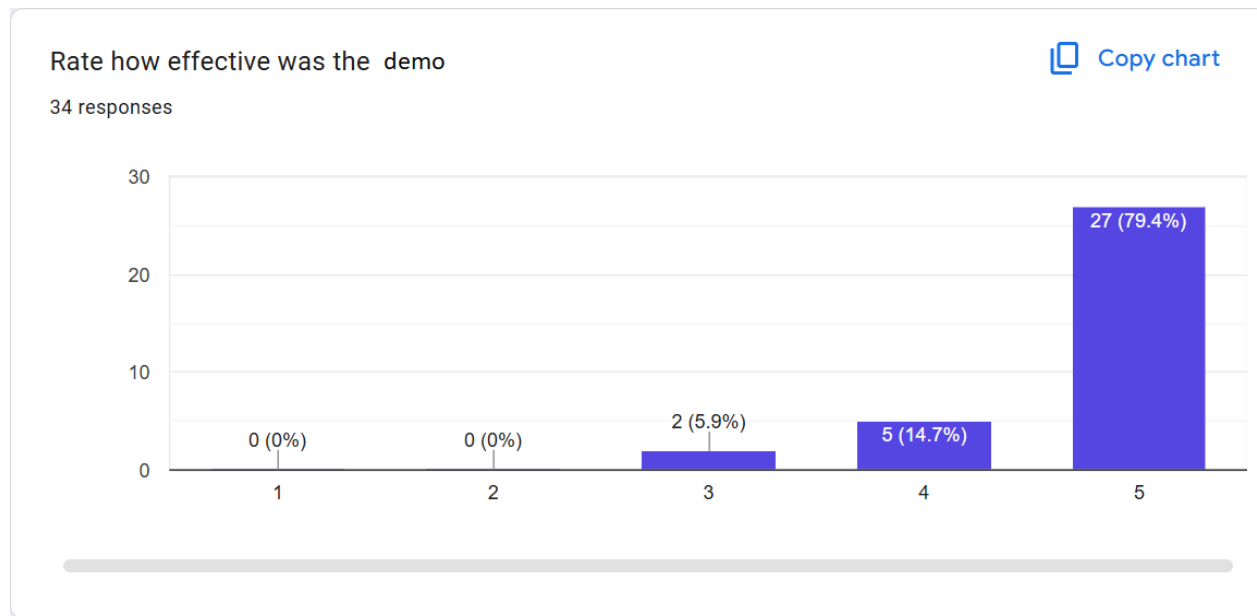

29-Oct-2025

Description: Project demonstration based on identifying fake and real images was given to TY students. The technology used in the project was CNN. Students could relate to the classificatio, supervised learning and neural network concepts.

Objective: The objective of this pedagogic technique was to help students understand real-life application of deep learning and supervised learning.

Impact: Students could relate to the application. They understood how concepts learnt in class and lab can be applied to real-life examples.

Feedback from students:
